

# Jones Family Home Project

Description: Our family is designing and building an sustainable, 100% eco-friendly home. We would like to use only green/renewable materials and use 100% renewable energy sources. We own a 2.4 acre plot of land and would like to do all the design and construction on our own. We are open to all ideas involved in the planning and execution of this project to include blueprint, material selection, timeline, and building. Please join our team if you want to contribute!
